

ALAVIS™ MSM + Glucosamine sulfate

ALAVIS MSM + Glucosamine sulfate for dog tbl 60

A reliable combination ALAVIS™ MSM and glucosamine sulfate for proper function of ligaments, tendons, joints and bones.

Recommended for whelps and young dogs to assure proper development of their locomotive apparatus and also for dogs of any age having joint, bone and muscle attachment problems as well as for prevention of these problems. The unique composition of this preparation provides for dramatic analgetic and antiphlogistic effect.

Quality parameters in 1 tbl :

- Glucosamine sulfate 750 mg
- ALAVIS™ MSM 500 mg
- Borage oil 25 mg
- Basic mixture (pharmaceutical gelatine, ginger, curcuma, boswelvia) 75 mg

Can be administered to:

- whelps starting from 2 – 3 months of age
- young dogs
- sporting and working dogs (training, racing, harness, agility)
- aged and over-weighted dogs

In addition to this, the preparation can be administered for the following joint diseases (where positive results of the preparation have been demonstrated):

- articular dysplasia (particularly big and very big breeds)
- patella luxation and subluxation (preferably small breeds)
- particular knee ligament rupture
- syndesmitis, tendinitis, myositis
- post-traumatic and post-surgery conditions
- backbone problems
- osteoarthritis
- osteoporosis

Dosage:

Weight	Firsth 14 days of therapy (pill/day)	Maintenance dose (pill/day)
(1 – 5 kg)	0,5 pill	0,25 pill
(5 – 10 kg)	1 pill	0,5 pill
(10 – 15 kg)	2 pills	1 pill
(15 – 25 kg)	3 pills	1,5 pills
(25 – 45 kg)	4 – 5 pills	2 – 2,5 pills
(45 a více kg)	5 – 6 pills	2,5 – 3 pills

When in doubt consult your vet.

Period of administration: Can be administered for a long period of time.

Package: 60 pills.

Remark:

Can be administered together with drugs indicated for locomotive apparatus diseases (e.g. analgetica, non-steroid antiflogistica) and also with the feed already containing glucosamine sulfata.
